

# WAYFINDING TECHNOLOGY

## ONYX FirstVision™

### Pointing the Way for a Faster Response

In an emergency, the only thing more important than speed is reliable information. With ONYX FirstVision, a first responder or incident commander goes directly to the system's interactive touch screen to quickly assess critical information such as the origin of the event and path of direction. This provides firefighters and other emergency personnel with the tools needed to quickly develop and execute a safer, more effective response that can potentially reduce the loss of property and life.

#### Get the Whole Picture, Quickly and Accurately

Current annunciators only display information from the fire alarm control panel, typically only showing which devices are in alarm. On its 22" LCD, wall mounted touch screen, ONYX FirstVision displays entire floor plans with the location of all active alarm system devices, potential hazards, and additional access and egress routes. Armed with this information first responders can quickly assess a situation which inevitably saves lives, property and assets.

#### See the Whole Campus or a Single Detector

Using ONYX FirstVision, emergency responders quickly identify any and all areas of concern within an individual building or multiple buildings throughout a campus. With an entire campus in view, incident commanders can direct arriving personnel and apparatus to strategic positions around the emergency. Then, with just a few touches of the screen, they can narrow their focus down to an individual building, floor, or room – even a single, activated smoke detector.
